1 Getting Started

1.1 Introduction 2

1.1.1 Computers as a Tool ............................................. 2
1.1.2 A Note about Notation and Style .............................. 3
1.1.3 Notation and Symbols ......................................... 3

1.2 Arithmetic and Algebra 5

1.2.1 Arithmetic and Notation ...................................... 5
1.2.2 Algebraic Manipulations ..................................... 7
1.2.3 PowerExpand .................................................... 10
1.2.4 Simple Rules ................................................... 10
1.2.5 A Homemade Complex Conjugate with SuperStar .......... 11
1.2.6 Immediate and Delayed Substitutions ......................... 12
1.2.7 Selecting Parts of Expressions ............................... 13
1.2.8 Algebraic Equations ........................................... 13

1.3 Functions and Procedures 15

1.3.1 Built-In Functions .............................................. 15
1.3.2 User-Defined Functions ..................................... 16
1.3.3 Pure Functions .................................................. 18
1.3.4 Assigning Rules and Restrictions to Functions .......... 19
1.3.5 Module ............................................................. 21
1.3.6 rootPlot .......................................................... 22

1.4 Packages 24

1.4.1 Loading Packages ............................................. 24
1.4.2 Contexts .......................................................... 26
1.4.3 Shadowing ........................................................ 27

1.5 Calculus 28

1.5.1 Derivatives and Integrals ................................... 28
1.5.2 Differential Equations ....................................... 30
1.5.3 Changing Variables and Pure Functions .................. 30
1.5.4 Numerical Solutions of Differential Equations .......... 31

1.6 Graphics 33

1.6.1 Using the Plot Command ..................................... 33
1.6.2 Animated Plots ................................................ 35
1.6.3 Vector Field Plots ............................................. 36
1.6.4 Three-Dimensional Graphics Using Plot3D and ParametricPlot3D 38

1.7 Exercises 40
# General Physics

## 2.1 Introduction  45

## 2.2 Newtonian Mechanics in Inertial Frames  45

### 2.2.1 Overview  45

- 2.2.1 Escape Velocity  46
- 2.2.2 Projectile in a Uniform Gravitational Field  48
- 2.2.3 Reflecting Trajectories  53
- 2.2.4 Falling Projectile with Linear Air Resistance Drag  55
- 2.2.5 Falling Projectile with Quadratic Air Resistance Drag  64
- 2.2.6 Rocket with Varying Mass  69
- 2.2.7 Keplerian Orbits  76

## 2.3 Newtonian Mechanics in Rotating Frames  81

### 2.3.1 Overview  81

- 2.3.1 Projectile Motion as Measured by an Observer on Earth  81
- 2.3.2 Foucault Pendulum  90

## 2.4 Electricity and Magnetism  98

### 2.4.1 Overview  98

- 2.4.1 Charged Disk  99
- 2.4.2 Uniformly Charged Sphere  101
- 2.4.3 Electric Dipole  107
- 2.4.4 Magnetic Vector Potential for a Long Straight Wire  113
- 2.4.5 Motion of a Charged Particle in a Uniform $B$ Field  116
- 2.4.6 Motion of a Charged Particle in a Uniform $B$ Field and Time Varying $E$ Field  119

## 2.5 Modern Physics  122

- 2.5.1 Carbon Dating  122
- 2.5.2 Stable Isotopes  124
- 2.5.3 The Bohr Atom  129
- 2.5.4 Relativistic Collision  132

## 2.6 Exercises  133
3 Oscillating Systems

3.1 Introduction 131

3.2 Linear Oscillations 132
  3.2.1 Overview 132
  3.2.2 Initialization of User-Defined Functions 133
    phasePlot: Phase Plot for One-Dimensional System 133
    timePhasePlot: Time Behavior of Phase Plot for a
    One-Dimensional System 133
  3.2.3 Potential and Phase Diagrams for the Linear Oscillator 141
  3.2.4 Damped Linear Oscillator 145
  3.2.5 Damped Harmonic Oscillator and Driving Forces 151

3.3 Small Oscillations 159
  3.3.1 Overview of Small Oscillations and Normal Modes 159
  3.3.2 Initialization of User-Defined Functions for Small Oscillations and
    Normal Modes 160
    Eigenvalues and Eigenvectors for Small Oscillating Systems 160
  3.3.3 Two Coupled Oscillators along a Line 161
  3.3.4 Three Coupled Oscillators along a Line 168
  3.3.5 Three Coupled Oscillators along a Circle 174
  3.3.6 Double Pendulum 178
  3.3.5 Understanding the User-Defined Procedure smallOsc[] 182

3.4 Oscillating Circuits 185
  3.4.1 Overview 185
  3.4.1 Series RC Circuit 185
  3.4.2 Series RL Loop 187
  3.4.3 RLC Loop 190

3.5 Exercises 194

5 Discrete Dynamical Systems

5.1 Introduction 258
5.2 Logistic Map 261
  5.2.1 Overview ........................................ 261
  5.2.1 Logistic Map .................................... 261
  5.2.2 Logistic Fixed Points ........................... 266
  5.2.3 Logistic Cobwebs ............................... 271
  5.2.4 Logistic Bifurcations ........................... 273
  5.2.5 Logistic Lyapunov Exponent and Entropy .... 274
5.3 Other Maps 277
  5.3.1 Overview ........................................ 277
  5.3.1 Salmon Map .................................... 278
  5.3.2 Sine-Circle Map ................................ 282
  5.3.3 Taylor-Greene-Chirikov Map ................. 287
  5.3.4 Henon Map ..................................... 290
5.4 Fractals 292
  5.4.1 Overview ........................................ 292
  5.4.1 Mandelbrot Set ............................... 293
  5.4.2 Julia Set ........................................ 295
5.5 Exercises 297

# Lagrangians and Hamiltonians

6.1 Introduction 299

6.2 Lagrangian Problems without Lagrange Multipliers 300

6.2.1 Overview 300

6.2.2 Initialization for Lagrangian Problems 301

6.2.3 Particle Sliding on a Movable Incline 302

6.2.4 Bead Sliding on a Rotating Wire 304

6.2.5 Bead on a Rotating Hoop 309

6.2.6 Spring Mounted on Top of a Carriage 319

6.2.7 Mass Falling through a Hole in a Table 324

6.2.8 Spring Pendulum 329

6.3 Lagrangian Problems with Lagrange Multipliers 338

6.3.1 Overview of Nonholonomic Constraints and Lagrange Multipliers 338

6.3.2 Atwood Machine 338

6.3.3 Hoop Rolling on an Incline 340

6.3.4 Sphere Rolling on a Fixed Sphere 343

6.4 Hamiltonian Problems 347

6.4.1 Overview of Hamilton’s Equations 347

6.4.2 Harmonic Oscillator 349

6.4.3 Nonlinear Oscillator 351

6.4.4 Cylindrical Coordinates 356

6.4.5 Swinging Atwood Machine 360

6.4.6 Spherical Pendulum 364

6.5 Hamilton-Jacobi Problems 368

6.5.1 Overview 368

6.5.2 Harmonic Oscillator 370

6.5.3 Particle in a Constant Gravity Field 373

6.5.4 Kepler’s Problem and Hamilton-Jacobi Equations 375

6.6 Exercises 378
### 7 Orbiting Bodies

#### 7.1 Introduction 378

#### 7.2 The Two-Body Problem 379

- 7.2.1 Overview ........................................ 379
- 7.2.1 Equivalent One-Body Problem ............... 379
- 7.2.2 Kepler Orbits ................................... 385
- 7.2.3 Precessing Ellipse .............................. 389
- 7.2.4 Numerical Solution ............................. 394

#### 7.3 Restricted Three-Body Problem 398

- 7.3.1 Overview of the Three-Body Problem and Initialization of PMotion and Mgraph .......................... 398
- 7.3.2 Problems on the Equal Mass Primaries ($\mu = 1/2$) .............................................. 401
  - 7.3.1 Lagrangian Points for Equal Mass Binaries ($\mu = 1/2$) ........................................ 401
  - 7.3.2 Looping Motion in an Equal Mass Binary System ($\mu = 1/2$) .................................. 406
  - 7.3.3 Symmetric Orbits about the y-Axis for $\mu = 1/2$ ................................................. 413
  - 7.3.4 Mass Exchange between Equal Mass Binaries ......................................................... 414
- 7.3.3 Problems on the Sun–Jupiter System ($\mu = .000954$) ............................................. 417
  - 7.3.5 Lagrangian Points for the Sun–Jupiter System ......................................................... 417
  - 7.3.6 Numerical Solution for the Trojan Asteroids ......................................................... 420
  - 7.3.7 Perturbative Solution for the Trojan Asteroids ....................................................... 424
- 7.3.3 Problems on the Earth–Moon System ($\mu = .01215$) .............................................. 429
  - 7.3.8 Lagrangian Points for the Earth–Moon System ....................................................... 429
  - 7.3.9 Motion about L[4] in the Earth–Moon System ......................................................... 432
  - 7.3.10 Orbit around the Earth and Moon ................................................................. 434

#### 7.4 Exercises 436
8 Electrodynamics

8.1 Introduction

Mathematica Commands for All Sections

8.2 Point Charges, Multipoles, and Image Charges

Mathematica Commands for Section 8.1

8.2.1 Overview

8.2.2 Superposition of Point Charges

8.2.3 Point Charges and Grounded Plane

8.2.4 Line Charge and Grounded Plane

8.2.5 Multipole Expansion of a Charge Distribution

8.3 Laplace’s Equation in Cartesian and Cylindrical Coordinates

8.3.1 Overview of Cartesian and Cylindrical Coordinates

8.3.2 Potential in a Rectangular Groove

8.3.3 Rectangular Conduit

8.3.4 Potential Inside a Rectangular Box with Five Sides at Zero Potential

8.3.5 Conducting Cylinder with a Potential on the Surface

8.4 Laplace’s Equation in Spherical Coordinates

8.4.1 Overview of Spherical Coordinates

8.4.2 A Charged Ring

8.4.3 Grounded Sphere in an Electric Field

8.4.5 Sphere with Upper Hemisphere V0 and Lower Hemisphere −V0

8.5 Exercises
# Quantum Mechanics
